

Flowers usually 2 -6, longer than broad, red-fuchsia with contrasting yellow blades, sepals 11 - 14 mm long. Petals 5 - 6 mm long

Stems copiously to sparingly glandular, with adhering sand grains

AQUILEGIA GRAHAMII

Scientific name: *Aquilegia grahamii* Welsh & Goodrich
(common name) Graham's columbine

Family: Ranunculaceae
(common name) Buttercup Family

Synonyms:
None

Global Distribution:
Endemic to the eastern Uinta Mountains, Uintah County, Utah

Land Ownership:
FS - Ashley NF

Habitat:
Sandy drip lines in hanging gardens of shaded canyons in the Weber Sandstone at 7,600 feet elevation, June - July.

Comments:
Similar to *A. micrantha* in the glandular pubescence, but the flowers are longer than broad, and are red-fuchsia with contrasting yellow blades.
