

Inflorescence a naked terminal
raceme, petals more than 11 mm

Leaf margins
entire to crenate

Shrub, mostly woody,
8-15 dm tall

PETALONYX PARRYI

Scientific name: *Petalonyx parryi* Gray
(common name) Parry's petalonyx

Family: Loasaceae
(common name) Stickleaf family

Synonyms:
P. nitidus ssp. *parryi* (Gray) Urban & Gilg

Global Distribution:
Washington County, Utah; Nevada and Arizona

Land Ownership:
BLM - St. George Field Office, State Lands, and private

Habitat:
Shadscale, indigo bush, creosote bush, and ambrosia communities, on Chinle and Moenkopi outcrops between 2,550 and 4,000 feet elevation, May.

Comments:
Differs from *P. nitidus* in its predominantly woody habit, its entire to crenate leaf margins (vs. coarsely few-toothed), and its petals longer than 11 mm vs. shorter.
